Website Account Management (Danielle Gibson)

P4 Full Time 10161878 10/09/2026

Job Summary:

At Disney Experiences Technology, we design and deliver more than 400 digital and physical products that bring Disney stories to life in unexpected ways. From theme parks and resorts to

cruise ships and beyond, our global team of technologists, designers, and innovators creates seamless, immersive experiences that delight millions of Guests and Cast Members around the world.

The Disney Signature Experiences and Data team delivers innovative technology solutions across Disney Cruise Line, Disney Vacation Club, Storyliving by Disney and our global tour businesses. We support Guest and Cast experiences, enable commercial growth through digital platforms, and lead the segment's data strategy. With a strong focus on reliability, scalability, and strategic expansion, we build systems that support immersive experiences and unlock new opportunities for growth.

This role is on the Emerging Business Technology team, which delivers Guest and Cast systems, commercial platforms, web and app experiences, and infrastructure operations that support our Storyliving by Disney, Adventures by Disney and National Geographic Expeditions lines of business.

What You Will Do:

This role will serve as a key team member responsible for work within the Emerging Business team. Reporting to the Manager, Product Management, your responsibilities will include:

- Partner with business, technology, and vendor teams to gather, document, and validate detailed functional and technical requirements across Club/Resident systems, Commercial and other digital and technical platforms.
- Map current- and future-state process flows, proactively identifying operational gaps, risks and dependencies before they impact a launch or the Guest/Member experience.
- Translate business and Product strategy into precise, structured documentation (requirements, user stories, acceptance criteria, functional design specs and process flows) for technical and delivery teams.
- Own traceability of business requirements through technical specifications and test cases; contribute to the Risks, Actions, Issues and Decisions (RAID) log and proactively flag issues for resolution.
- Lead test planning and execution: develop and review test scripts, validate configurations against acceptance criteria, coordinate test data and scenarios with the business, and triage

defects through resolution.

- Serve as a trusted point of contact for vendor and cross-functional follow-through, tracking open items, resolving configuration and data issues and ensuring timely closure of tickets and partner questions.
- Build and maintain Knowledge Base materials, runbooks and reporting frameworks that capture institutional knowledge and translate complex, sensitive data (e.g., financial configurations, dues calculations, membership terms) into clear, actionable documentation.
- Support Product Managers and delivery leads during discovery by surfacing operational feasibility, edge cases and configuration constraints early in the lifecycle.
- Participate in agile ceremonies (scrum, sprint planning, demos) and functional/technical design sessions, confirming that what is built aligns to documented requirements.
- Build strong, durable relationships with a diverse set of stakeholders (business partners, solution architects, delivery managers and external vendors) grounded in reliability, follow-through, and clear communication.

Required Qualifications & Skills:

- 7+ years combined business and digital experience with 2+ years in a business analyst or product management position
- Experience with technical, user and business issues in a digital organization.
- Experience collaborating with and achieving applicable results through others with the capability to interact across all levels in large matrixed organizations.
- Demonstrated success gathering, documenting, and validating detailed business and functional requirements for cross-functional technology efforts.
- Demonstrated decision-making skills, problem-solving skills, as well as continuous improvement process skills.
- Persistent, organized follow-through with the ability to independently manage multiple concurrent workstreams and stakeholders, balancing competing priorities and deadlines with minimal oversight.

- Experience supporting test planning, execution, defect triage and validation against acceptance criteria, particularly for systems involving sensitive data (e.g., payments, member records).
- Clear, precise written and verbal communication with both technical and business audiences.
- Comfortable operating within a clearly scoped workstream, translating an established Product strategy and prioritization into precise execution.
- Adaptable and resilient when requirements shift or ambiguity arises within an assigned workstream.
- Experience with Agile software development methodology and defect-tracking platforms (e.g., Jira, Confluence).

Preferred Qualifications & Skills:

- Skilled at building trusted, long-term relationships with vendors and delivery partners across a complex organization.
- Exceptional attention to detail and documentation rigor; consistently identifies gaps and risks that others may miss.
- Proficiency in data and reporting tools to build dashboards and performance-tracking materials.
- Strong technical curiosity; anticipates edge cases and asks thorough questions to de-risk delivery.

Required Education:

- Bachelor's degree in Computer Science, Information Systems, Software, Electrical or Electronics Engineering, or comparable field of study, and/or equivalent work experience.

The hiring range for this position in Orlando, Florida is $113,500.00-$152,200 per year. The base pay actually offered will take into account internal equity and also may vary depending on the candidate’s geographic region, job-related knowledge, skills, and experience among other factors. A bonus and/or long-term incentive units may be provided as part of the compensation package, in

addition to the full range of medical, financial, and/or other benefits, dependent on the level and position offered.
